Summary

B.Tech graduate in Computer Science with specialization in Artificial Intelligence and Machine Learning. Skilled in Python, PyTorch, TensorFlow, Scikit-learn, and Hugging Face Transformers. Hands-on experience in developing machine learning and deep learning applications in computer vision, NLP, and generative AI. Developed projects including medical image segmentation, retrieval-augmented generation (RAG) chatbot systems, and real-time object detection. Certified in Oracle Cloud Infrastructure Generative AI.

Education

B.Tech in Computer Science – Artificial Intelligence & Machine Learning <i>Alliance University, Bengaluru</i>	CGPA: 8.3/10 <i>Dec 2022 – May 2026</i>
II PUC – PCMB <i>BGS INDP PU College, Mandya</i>	Percentage: 89.83% <i>Jun 2021 – Mar 2022</i>
SSLC / 10th Grade <i>Government PU College, Mandya</i>	Percentage: 90.24% <i>Jun 2019 – Mar 2020</i>

Technical Skills

Languages: Python, Java
Web Technologies: HTML, CSS, JavaScript
Database Technologies: SQL, Oracle Database concepts, FAISS(Vector Indexing)
Cloud & Others Oracle Cloud Infrastructure(OCI), OCI Generative AI Services
Tools & Platforms: Git, GitHub, VS Code
Core Concepts: Deep Learning, Computer Vision, NLP, Data Structures Algorithms, OOP

Projects

Brain Tumor Detection via Color Contrast Channeling – Engineered a Dense Attention U-Net model for brain tumor segmentation on MRI scans, achieving a Dice score of 0.89 on the BraTS dataset with 3,000+ images – Integrated Grad-CAM heatmap visualization with a ResNet50 backbone to provide interpretable model predictions for AI-assisted diagnosis – Deployed the complete pipeline as a Flask web application with image upload, real-time inference, and heatmap overlay rendering in under 3 seconds per scan	Python, PyTorch, Flask, OpenCV
Advanced Medical Q&A Chatbot Powered by LLaMA 2 – Architected a Retrieval-Augmented Generation pipeline connecting LLaMA 2 7B with a medical knowledge base of 1,000+ documents using FAISS vector search – Improved answer grounding and reduced irrelevant responses through retrieval-based context injection and custom prompt templates – Built a REST API using FastAPI with a Chainlit chat interface, supporting real-time medical question answering with sub-2-second response latency	Python, LangChain, FastAPI, Chainlit
Vehicle Identification & Classification System – Built a real-time vehicle detection system using YOLOv5, achieving 92% mAP@0.5 across 5 vehicle categories on a custom dataset of 5,000+ annotated images – Applied transfer learning with ResNet50 for fine-grained vehicle type classification, achieving 95% top-1 accuracy on the test set – Implemented a live video stream processing pipeline using OpenCV capable of handling 30 FPS inference on GPU-enabled hardware	YOLOv5, ResNet, TensorFlow, OpenCV

Certifications

Oracle Cloud Infrastructure Generative AI Professional – Oracle, 2025
CertNexus Certified Artificial Intelligence Practitioner – Coursera, 2024
Relational Database Design – Coursera, 2023
Machine Learning with Python – Coursera / IBM, 2024
Data Structures & Algorithms – Coursera, 2024
Compiler Design – NPTEL, 2025
